EDUCATION CATALOGUE 2020

More than
600
new books
inside!

Welcome to our 2020 catalogue

At Franklin Watts and Wayland, we take great pride in creating books that give children of all abilities a life-long love of learning and reading.

We are very excited to showcase our new and bestselling books that have been developed to support teachers and inspire children. We have been creating books for schools and libraries around the world for over 40 years. Every Franklin Watts and Wayland book has been developed by an expert, and therefore our quality and trustworthiness is unparalleled.

Whether you are looking for engaging curriculum resources, up-to-date topics, high-interest reads or gripping fiction to encourage reading for pleasure, our books are essential additions to any school, home, classroom or library.

Highlights include:

-  An ecology section reflecting the concerns and importance of this topic for children and the world alike.
-  Books to support mental health awareness for young children, as well as books that cover the new RSE curriculum.
-  We have continued to grow our book-banded independent reading series, Reading Champion, with the UCL Institute of Education, providing the very best support for reading development from ages 3 to 11.
-  And that's not forgetting our core subject publishing around Science, Geography and History that stand out for the creative and accessible approach to delivering key information.
-  We've also put together some value packs that are an easy way to buy resources to support your curriculum needs in a cost-effective way. Find them on page 9.

What you think is really important to us, so we'd love to hear from you. Please get in touch with us at education@hachettechildrens.co.uk

With best wishes,

Paul Rockett

How to Build an Orchestra

Find out what makes up an orchestra and learn about its different instruments with this beautifully illustrated book, produced in association with the London Symphony Orchestra

This wonderfully illustrated story follows a conductor who is auditioning each instrument for his orchestra. With accompanying CDs and downloadable music, follow our conductor on his journey and discover the beautiful music of an orchestra.

With pictograms of a full-size symphony orchestra and information on all of the music featured, as well as a foreword by Sir Simon Rattle, Music Director of the LSO, this is the must-have book on the orchestra and its instruments for children aged 7+.

- The book comes with 2 CDs and downloadable music that accompanies the story so that the reader can listen to each of the instruments auditioned and learn their unique sounds
- All instruments are represented accurately and in great detail, a perfect guide for 7+ readers

17 WAYS TO SAVE *THE* WORLD

17 Ways to Save the World is an accessible guide to how children can help the UN achieve their 17 Sustainable Development Goals. As well as charting the global issues identified in the Goals, this book will demonstrate how small lifestyle changes can help in solving the world's biggest issues, empowering the reader to actively pursue a more sustainable future.

This book is the perfect tool for kids aged 9+ looking to make a meaningful difference. Immersive artwork and sensitive text presents serious, worldwide problems in an compassionate manner, encouraging both empathy and action.

GOAL 14 **LIFE BELOW WATER**

Oceans teem with life below the water. Seahorses, starfish, sharks and other amazing creatures feed, swim and have young in this beautiful blue world.

People depend on oceans, too. Tiny ocean plants release half of all the oxygen we need to breathe. Ocean waters soak up carbon dioxide from the air, helping slow our planet's climate change. On top of all of this, billions of people rely on oceans for transport, food, jobs and for fun.

Oceans look after us, but we are not taking such good care of the oceans. We take too many fish out of the sea before they have had the chance to produce young. This reduces fish numbers so there are fewer for sea creatures – and us – to eat.

One of the biggest threats to our oceans is plastic waste.
Sea turtles choke on plastic bags, they mistake for jellyfish, seabirds feed their chicks with tiny plastic bits instead of food, old fishing nets strangle seals and other animals, and plastic waste damages coral reefs that shelter millions of animals.

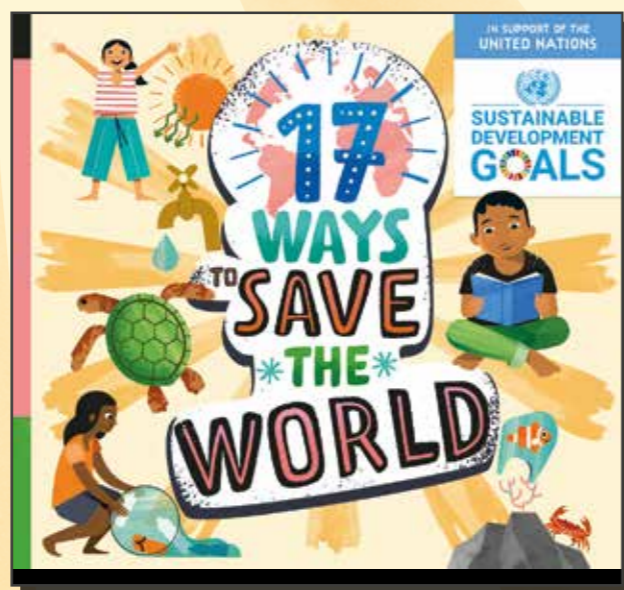

FACTS

- One in two turtles have eaten plastic.
- Nine out of ten seabirds have plastic blocking up their stomachs.
- About 8 million tons of plastic – enough to cover every centimetre of coastline in the world – gets into the oceans every year.
- By 2050, there could be more plastics in the oceans than fish.

Help the United Nations to save the world!

On 25th September 2015, world leaders at the UN adopted 17 Sustainable Development Goals. These new Goals, which universally apply to all people, are a call to take action to end all forms of poverty, fight inequalities and tackle climate change, while ensuring no one is left behind.

For the Goals to be reached, it is not just the actions of governments and businesses that are important – **you can help the UN save the world, too!**

- Written in support of the UN
- Encourages action and gives real-life examples of how the reader can make a difference
- Launched alongside the 75th anniversary of the UN

Celebrate the eco-heroes around the world building a better tomorrow

Eco Stories for those who Dare to Care is the perfect introduction to environmentalism and the world-changing lives that have fought for our planet's future. From Greta Thunberg to David Attenborough, Rachel Carson to Wangari Maathai, activists of all ages, from all corners of the planet, will inspire readers to think and take action on the most important issues of our era.

Beautiful and characterful portraits help bring to life these important activists and their contributions to our world. Clear, concise text presents the stand-out biographical information from these inspirational figures, and acts as a perfect primer for conversations about activism and environmentalism. This is the perfect book for eco-warriors aged 9 and up.

- A global view of environmentalists with an equal split between significant men and women
- Covers a range of ecological issues, including plastic pollution, deforestation, conservation and nuclear power
- A visually stunning introduction to activists you should know

The Up-close Atlas

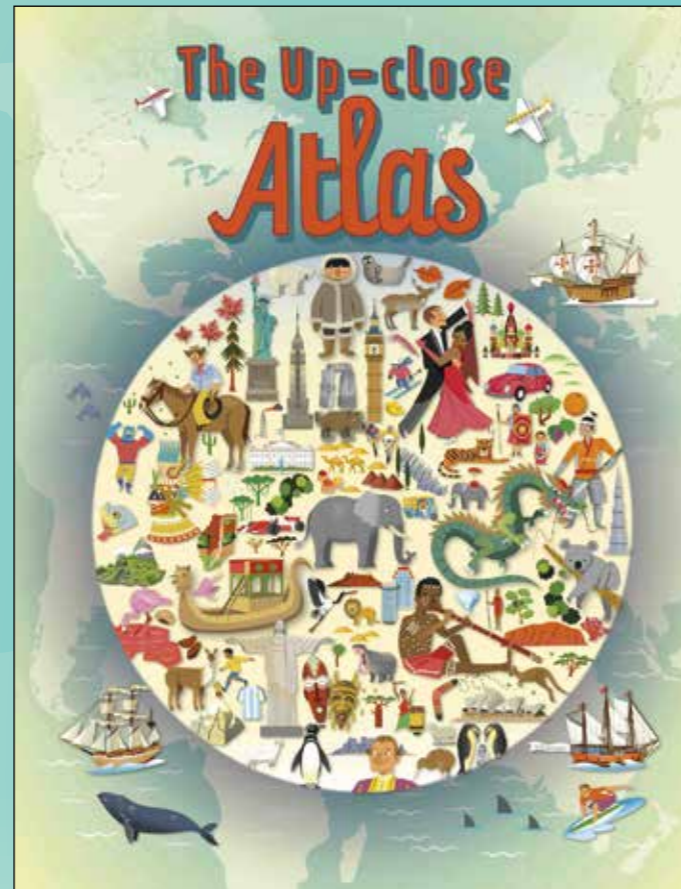

Bright, clear and engaging maps and illustrations make this a lively exploration of our world's geography

Journey around the globe and get up-close to the different cultures, geography and wildlife that make up our world

This unique illustrated book gets close up to Earth's amazing continents, and allows readers the opportunity to explore key countries, topographical features and cities in a way that is both engaging and entertaining. In addition, the book highlights significant human, geographical, sporting and economic information, perfect for children aged 9+.

With the help of fun artwork, illustrated maps, photos and facts, this atlas is a comprehensive guide to our planet and (almost) everything on it!

Where is Africa?

Africa is the second largest continent in the world and covers over one-fifth of the Earth's surface. Its mainland is connected to Asia by a narrow stretch of land, while large oceans and sea surround the rest of the continent.

Mainland

The mainland of Africa is so large that you can fit the USA, China, India, Argentina and Western Europe in it, and still have extra land to spare.

Early map

One of the earliest maps of Africa was made by the German mapmaker Sebastian Münster, in around 1544. It was made from information gathered by European explorers, and much of it was incorrect.

The border between Egypt and Israel is also the border between Africa and the continent of Asia.

The continent of Africa includes six islands that surround the mainland; Madagascar is the largest.

The Equator

The Equator is an imaginary line running around the widest part of the Earth, halfway between the North Pole and the South Pole. It divides the Earth into the Northern Hemisphere and the Southern Hemisphere.

The Equator runs through the African countries of Gabon, Republic of Congo, Democratic Republic of Congo, Uganda, Kenya and Somalia.

The Tropics

The Tropics are imaginary lines that run around the Earth where temperatures are high all-year round.

The Tropic of Cancer runs around the Earth about 23.5 degrees north of the Equator and goes through the African countries of Algeria, Niger, Libya, Egypt, Mali, Mauritania, Chad and Morocco.

The Tropic of Capricorn runs about 23.5 degrees south of the Equator and goes through the African countries of Namibia, Botswana, South Africa, Mozambique and Madagascar.

Locating Africa

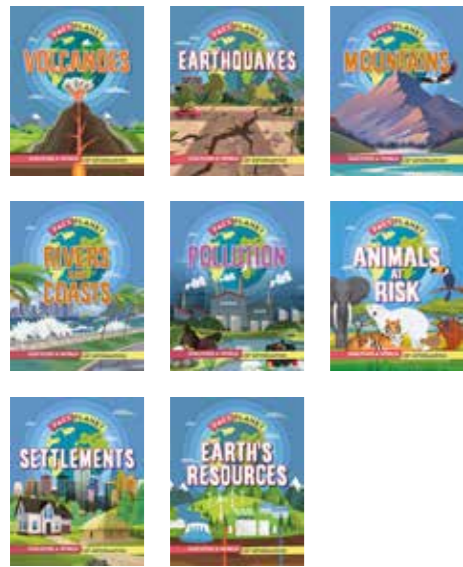

We can describe the location of Africa in relation to the areas of land and water that surround it as well as using the points on a compass.

- Africa is west of Asia
- Africa is south of Europe
- Africa is between the Atlantic Ocean and the Indian Ocean

- Looks at different types of maps, map reading and early maps
- Covers key geography topics

RADIOACTIVITY

In 1896, French scientist Henri Becquerel (1852-1908) discovered that the element uranium could give off particles and energy in the form of powerful, invisible rays. Two married scientists, Pierre (1859-1906) and Marie Curie (1867-1934), named these rays, radioactivity.

The Curies investigated pitchblende, a substance found in the ground that contains uranium, but has higher levels of radioactivity than pure uranium. They realised that pitchblende must contain another, more radioactive substance.

In July 1898, the Curies announced their discovery of a new chemical element: polonium. They named it polonium after Maria's home country of Poland. Four months later, they discovered radium, another chemical element, which glowed with energy in their laboratory. Radium proved to be over a million times more radioactive than uranium.

For their discoveries, which helped start a whole new branch of science, the Curies along with Henri Becquerel were awarded the 1903 Nobel Prize for Physics - the first awarded to a woman. After her husband died in a 1906 road accident, Marie Curie continued studying radioactivity. She managed to isolate pure radium and discovered that it gave off radon gas. This could be collected and its radioactivity used to combat cancer. In 1911, she became the first scientist, male or female, to win a second Nobel Prize.

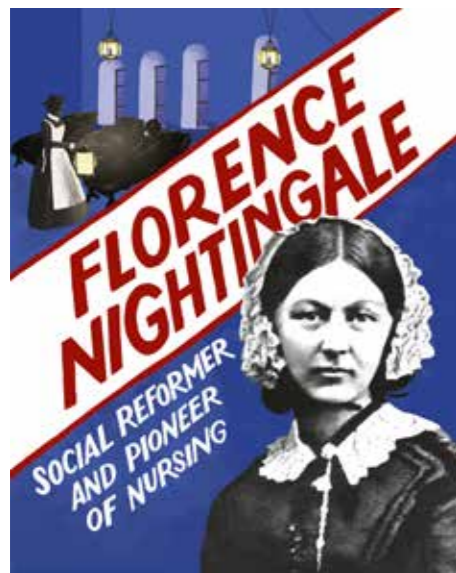

Fact panels give snippets of extra information or link discoveries or inventions to later advances in the field

Spread shown from *Scientific Discoveries*

Petites Curies

Marie Curie and her daughter, Irène, organised and help operate a host of mobile X-ray units during the First World War (1914-18). The trucks, which became known as 'Petites Curies', carried X-ray machines to the battlefield to help army doctors locate bullets and shrapnel in wounded soldiers' bodies, saving many lives.

Children in Our World

Beautifully illustrated picture books that sensitively explain issues that dominate the news in an appropriate manner for children

The *Children in Our World* picture book series helps children understand how we can all make the world a better and safer place. With relatable comparisons, carefully researched text and striking illustrations, children can explore what human rights are, why understanding other cultures is important, and how the planet is affected by climate change and pollution.

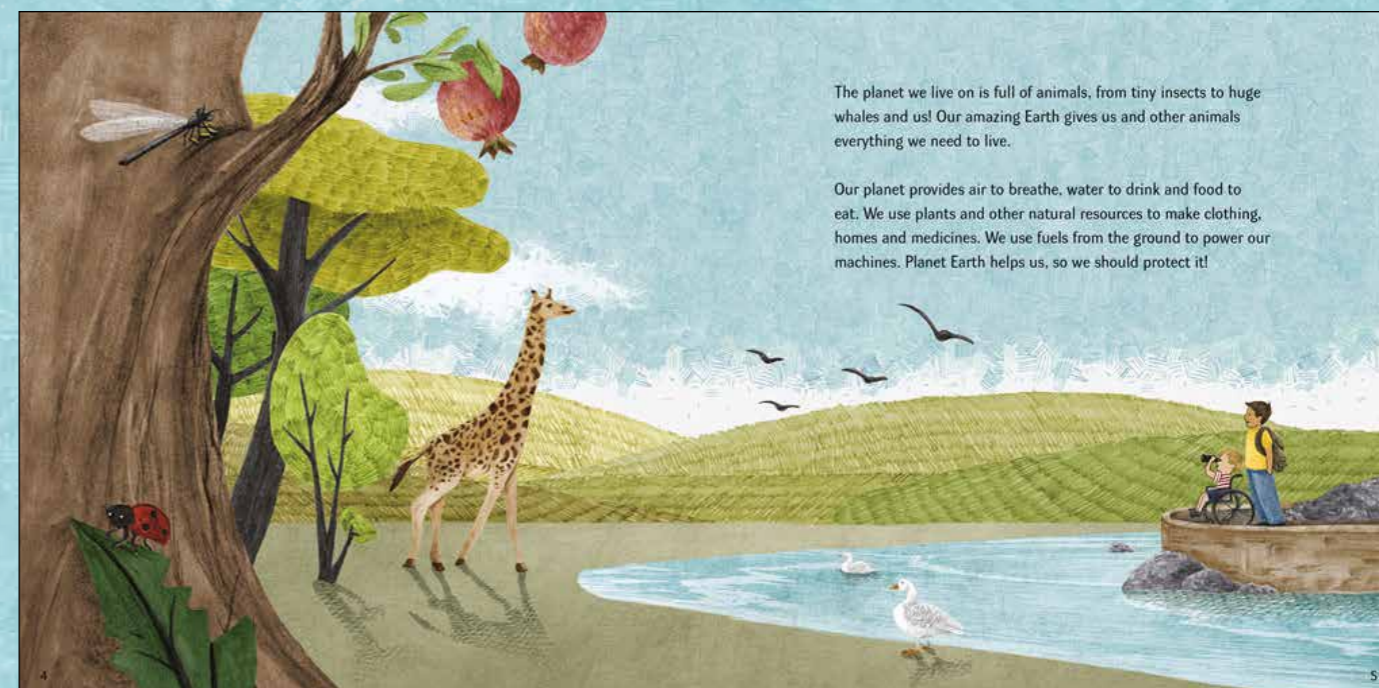

Where issues aren't appropriate to describe in words, Hanane Kai's striking and sensitive illustrations help children visualise the issues with images that are suited to their age.

'Words and pictures combine to excellent effect ... an excellent way to develop empathy and understanding' Parents In Touch

- Illustrated by award-winning Lebanese artist Hanane Kai, who creates beautiful thought-provoking illustrations
- Age appropriate content for children to learn about larger issues in a safe environment

Spread shown from *Children in Our World: Protecting the Planet*

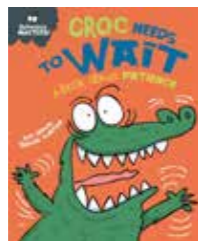

The planet we live on is full of animals, from tiny insects to huge whales and us! Our amazing Earth gives us and other animals everything we need to live.

Our planet provides air to breathe, water to drink and food to eat. We use plants and other natural resources to make clothing, homes and medicines. We use fuels from the ground to power our machines. Planet Earth helps us, so we should protect it!

Author: **Louise Spilsbury, Marie Murray, Hanane Kai**

Themes: Mental health and relationships

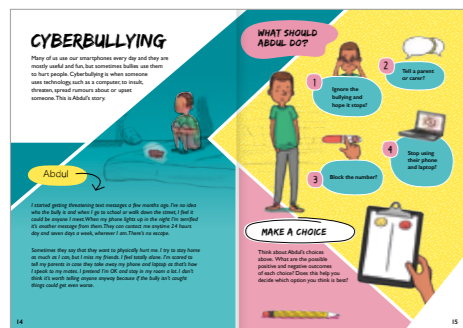

A Problem Shared

A series that views issues from two sides to encourage positive and proactive engagement with difficult situations.

- Looking at a problem from two sides gives these books a balanced look at common areas of conflict. Instead of telling readers what to think, these books encourage critical thinking and support them as they question their own assumptions and bias
- Friendly illustrations help bring sensitivity and balance to the tough nature of some of these issues
- Author, Louise Spilsbury is well-versed in writing about social issues and has a sensitive style that will appeal to readers

A Problem Shared: Talking About Bullying	9781445171265	13/08/2020

CATS REACT

Share in the wonderment of science and outer space with a crew of crazy cats and measure your amazement, awe and disgust alongside their furry feline faces

Like every topic, science becomes more interesting when cats are involved. The *Cats React* books are an engaging and fun way to understand our universe and the world of science. They're just purrfect! Bitesize text, fun photos, diagrams, dollops of humour and a react-o-meter all help to make science memorable and fun to learn.

These books are a great gift for cat lovers and science students aged 7 and beyond, covering key science topics in a unique way

- Cat lovers will go crazy for the cute and humorous pics of their furry friends, confirming that cats really are smart!
- A laugh-out-loud, perfect way to get kids engaged with science and outer space
- Clear descriptions and fun photos help to make science memorable

GO QUIZ YOURSELF!

THE ULTIMATE QUIZ SERIES FOR CHILDREN AGED 8+, FULL OF FUN, FAST FACTS!

Learning loads of facts is boring, right? Not with these books! Each chapter is packed with fast facts followed by a short quiz, making these books perfect for revising for a test or for children who want to master their topic of interest.

These books are designed as a companion resource for children studying core curriculum topics. Illustrations, timelines and graphics work with captions and extended texts to challenge a child's skills in memory, comprehension and reading. Kids will barely realise they are learning when the competitive element takes over as they aim to become the Quizmaster.

The books contain loads of information, but as the quiz sections are spaced evenly throughout, it can make the challenge less overwhelming. These books can be used by readers to test themselves, test their friends or as a ready-made resource for teachers in need of a pop-quiz for their class.

- The quiz format is a fun way to learn fast facts about a topic or to cram for tests
- Information is presented in a variety of ways to aid different styles of learning
- Packed full of information, but with a spread-to-quiz format that makes topics less overwhelming and holds the readers' interest

Spread shown from *Go Quiz Yourself: Around the World*

NORTH AMERICA

North America is the third largest continent. It stretches for 8,000 km from north to south, coming within 800 km of both the North Pole and the equator.

- Number of countries: 23
- Size: 24,230,000 square km
- Population: 370 million

CITIES

Some of the largest cities on Earth are found in North America. Mexico City, the capital of Mexico, is the largest city in North America. In the USA, many people live in the huge cities of New York and Los Angeles.

NORTH TO SOUTH

The north of the continent is close to the North Pole. This area has cold temperatures and ice and snow. As you move south, the most common habitats are forests and grassland (known as prairies). There are also areas of desert. Central America and the Caribbean islands have a tropical climate with rainforests.

NORTH AMERICAN LANDMARKS

- 1 The Rocky Mountains, Canada/USA
- 2 Golden Gate Bridge, USA
- 3 Pyramid of the Sun, Mexico
- 4 CN Tower, Canada
- 5 Tikal, Guatemala

ENGINEERING POWER! MACHINES

Discover the engineering behind how machines work

The *Engineering Power* series explores the most amazing machines from the past to present day. It pulls out key engineering details to inform and inspire the next generation of engineers.

From cranes and submarines to tanks and stealth jets, find out how machines have been built to lift heavy weights, be submerged in deep oceans, roll forward over rough terrain and zip quietly past in the sky overhead.

Perfect for readers aged 9 and up.

Written in consultation with a Chartered Civil Engineer, Member of the Institution of Civil Engineers

Large illustrations combined with photo inserts and diagrams show machines operating in the real world

Spread shown from *Engineering Power: Machines at Sea*

SUBMERSIBLES

A submersible is like a submarine, but much smaller. Sometimes, it's crewed by just one person. And while a submarine can operate entirely on its own, a submersible relies on a support team at the surface. These tiny craft are often used for underwater research and exploration.

The Triton 3300/3 can take three people to a depth of 1,000 m.

EXPLORING THE OCEAN

There are different types of submersible. Remotely operated vehicles (ROVs) are attached, or tethered, to a vessel on the surface by a cable. This cable provides power to the ROV, while communicating data back to the surface. It is also used to recover the ROV (haul it back to ship). An autonomous underwater vehicle (AUV) does not use a cable at all and supplies its own power. Un-crewed submersibles are perfect for dives that are too deep or too risky for humans.

Alvin (DSV-2) is a research submersible with room for a pilot and two scientists. The newest model has a titanium sphere to protect those inside from the water pressure at extreme depths. The submersible is fitted with steel weights that allow it to dive quickly. These are left on the seabed after each dive. Alvin has dived thousands of times. Once, it explored the wreck of RMS Titanic.

EXTREME ENGINEERING!

In 1960, Jacques Piccard and Don Walsh travelled to the bottom of the Mariana Trench in the western Pacific Ocean in a bathyscaphe - a free-diving submersible. The Trieste flooded air tanks with seawater to sink, then dumped its iron pellet ballast to go up again. At such depths, buoyancy is not provided by air but by tanks filled with petrol.

The bathyscaphe Trieste dived 10,911 m under the surface of the Pacific Ocean to reach the deepest place on Earth.

A primary reading series developed with UCL Institute of Education to help children become confident, independent readers

- **Modern and diverse stories**
With fun stories featuring a range of topics, cultures and settings, Reading Champion books will appeal to children of all backgrounds.
- **Carefully linked to book bands to offer the right level of challenge**
The books have been specifically written for independent reading and are designed to help children practise and embed their developing reading skills.
- **Ideal for schools and libraries, easy to use at home**
Reading Champion works alongside any guided reading scheme used in the classroom. Notes at the back of each book help parents and carers support reading at home.
- **Encourage reading for pleasure**
Entertaining stories at the right reading level make these the books that children will want to pick up and read themselves!

Spread shown from *A Cake for Gran*, Blue 4

Story trail
Start at the beginning of the story track. Ask your child to retell the story in their own words, pointing to each picture in turn to recall the sequence of events.

"Now we need to mix it," said Dad.

"Can I do it?" said Asha.

"Yes," said Dad. "But be careful."

Each book contains a fun activity to increase engagement, from story trails to quizzes and comprehension games

"Now we need to mix it,"

EDGE

Books to get children reading with confidence! Exciting fiction specially written to grab the attention of hard-to-reach readers.

- Engage reluctant readers with accessible storylines and bold graphic-novel-style illustrations
- Build reading stamina and comprehension with fast-paced storylines in short paragraphs
- Age-appropriate and accessible Hi-Lo (high interest, low ability) books for supporting those with a reading age lower than their actual age
- Printed using a font approved by the British Dyslexia Association
- Books are levelled for Accelerated Reader (ATOS), Book Band and Lexile*
- Written by award winning authors Steve Barlow, Steve Skidmore (Galaxy Warriors, IHERO) and Tony Bradman (Kid Force 3)

Ideal for guided reading with struggling readers, or as confidence-building independent reads

GALAXY WARRIORS
